

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1-8. (canceled).

9. (currently amended): ~~The cellular telephone set as set forth in claim 8,~~ A cellular telephone set capable of performing animation display of any one of a stored plurality of characters, comprising:

character presentation means for controlling animation display of said character upon occurrence of an event on the set depending upon history information corresponding to said event and further depending upon an occurrence timing of a predetermined operation relating to said event, wherein prior to the occurrence of said event, said character is not related to said occurring event, and said character presentation means selects said character from among the stored plurality of said characters depending upon the history information corresponding to said event,

wherein said character presentation means controls animation display of said character so as to differentiate patterns depending upon odd number and even number of an occurrence time of said predetermined operation.

10. (canceled).

11. (currently amended): ~~The cellular telephone set as set forth in claim 8, which~~
~~further comprises~~ A cellular telephone set capable of performing animation display of any one of
a stored plurality of characters, comprising:

character presentation means for controlling animation display of said character upon
occurrence of an event on the set depending upon history information corresponding to said
event and further depending upon an occurrence timing of a predetermined operation relating to
said event, wherein prior to the occurrence of said event, said character is not related to said
occurring event, and said character presentation means selects said character from among the
stored plurality of said characters depending upon the history information corresponding to said
event; and

a first casing containing a key operation portion and a second casing connected to said
first casing for opening and closing and detecting means for detecting open and closed conditions
of said first and second casing,

said character presentation means controls animation display of said character depending
upon result of detection of variation of opening and closing states of said first and second casing
by said detecting means.

12-19. (canceled).

20. (currently amended): ~~The character display presentation method as set forth in claim 19,~~ A character display presentation method of a cellular telephone set capable of performing animation display of any one of a stored plurality of characters, comprising:

controlling, responsive to occurrence of an event on the set, animation display of said character depending upon history information and further depending upon an occurrence timing of a predetermined operation relating to said event, wherein prior to the occurrence of said event, said character is not related to said occurring event, wherein the controlling the animation display selects said character from among the stored plurality of said characters depending upon the history information corresponding to said event,

wherein in said controlling the animation display, the animation display of said character is controlled so as to differentiate patterns depending upon odd number and even number of an occurrence time of said predetermined operation.

21. (canceled).

22. (currently amended): ~~The character display presentation method as set forth in claim 19,~~ A character display presentation method of a cellular telephone set capable of performing animation display of any one of a stored plurality of characters, comprising:

controlling, responsive to occurrence of an event on the set, animation display of said character depending upon history information and further depending upon an occurrence timing

of a predetermined operation relating to said event, wherein prior to the occurrence of said event, said character is not related to said occurring event, wherein the controlling the animation display selects said character from among the stored plurality of said characters depending upon the history information corresponding to said event,

wherein in said controlling the animation display, the animation display of said character is controlled depending upon result of detection of variation of opening and closing states of a first casing containing a key operation portion and a second casing connected to said first casing for opening and closing.

23-28. (canceled).

29. (currently amended): ~~The cellular telephone set as set forth in claim 27, A~~
cellular telephone set capable of performing animation display of any one of a stored plurality of characters, comprising:

character presentation means for controlling animation display of said character upon occurrence of an event in the set depending upon history information corresponding to the event, wherein prior to the occurrence of said event said character is not related to said occurring event, and said character presentation means selects said character from among the stored plurality of said characters depending upon the history information corresponding to said event.

wherein said character presentation means controls animation display of said character depending upon a timing of occurrence of a predetermined operation associated with said event on the basis of said history information,

wherein said character presentation means controls animation display of said character so as to differentiate patterns depending upon odd number and even number of an occurrence time of said predetermined operation.

30. (canceled).

31. (currently amended): ~~The cellular telephone set as set forth in claim 26, which further comprises~~ A cellular telephone set capable of performing animation display of any one of a stored plurality of characters, comprising:

character presentation means for controlling animation display of said character upon occurrence of an event in the set depending upon history information corresponding to the event, wherein prior to the occurrence of said event said character is not related to said occurring event, and said character presentation means selects said character from among the stored plurality of said characters depending upon the history information corresponding to said event; and

a first casing containing a key operation portion and a second casing connected to said first casing for opening and closing and detecting means for detecting open and closed conditions of said first and second casing,

said character presentation means controls animation display of said character depending upon result of detection of variation of opening and closing states of said first and second casing by said detecting means.

32. (previously presented): The cellular telephone set as set forth in claim 31, wherein said character presentation means determines character to be displayed in each event screen upon depression of call release button after telephone calling, depression of call release button after telephone call reception, upon occurrence of at least one of presence of not responded call and newly received mail, upon variation of state between open state and closed state of said first and second casings depending upon calling history, time of calling, call arriving history, time of call arrival, timing of detection of variation of state between open state and closed state of said first and second casing by said detecting means, and displays the determined character on the display screen.

33-35. (canceled).

36. (currently amended): ~~The character display presentation method as set forth in claim 34,~~ A character display presentation method of a cellular telephone set capable of performing animation display of any one of a stored plurality of characters, comprising:

controlling animation display of said character upon occurrence of an event in the set depending upon history information corresponding to said event, wherein prior to the occurrence of said event, said character is not related to said occurring event, wherein the controlling the animation display selects said character from among the stored plurality of said characters depending upon the history information corresponding to said event,

wherein in said controlling the animation display, the animation display of said character is controlled depending upon a timing of occurrence of a predetermined operation associated with said event on the basis of said history information

wherein in said controlling the animation display, the animation display of said character is controlled so as to differentiate patterns depending upon odd number and even number of an occurrence time of said predetermined operation.

37. (canceled).

38. (currently amended): ~~The character display presentation method as set forth in claim 33,~~ A character display presentation method of a cellular telephone set capable of performing animation display of any one of a stored plurality of characters, comprising:

controlling animation display of said character upon occurrence of an event in the set depending upon history information corresponding to said event, wherein prior to the occurrence of said event, said character is not related to said occurring event, wherein the controlling the

animation display selects said character from among the stored plurality of said characters
depending upon the history information corresponding to said event.

wherein in said controlling the animation display, the animation display of said character is controlled depending upon result of detection of variation of opening and closing states of a first casing containing a key operation portion and a second casing connected to said first casing for opening and closing.

39. (previously presented): The character display presentation method as set forth in claim 38, wherein in said controlling the animation display, the character to be displayed in each event screen is determined upon depression of call release button after telephone calling, depression of call release button after telephone call reception, upon occurrence of at least one of presence of not responded call and newly received mail, upon variation of state between open state and closed state of said first and second casings depending upon calling history, time of calling, call arriving history, time of call arrival, timing of detection of variation of state between open state and closed state of said first and second casing by said detecting means, and the determined character is displayed on the display screen.

40-41. (canceled).
